

WHAT IS CLAIMED IS:

1. A Dispersal Air Scrubber comprising:
an elongated cubical-shaped body having a plurality of
5 packing casters at its lower portion, a fog guide at its upper
portion and air inlet apertures formed at both sides;
a double inlet blower mounted in lower body shell defined at
the lower portion of the said body;
an air chamber acting as a sound damper provided on the said
10 double inlet blower; and
an ultrasonic transducer module acting as an atomizer
mounted on the said air chamber and having a hose conducting the
oxidizing vapor and connecting it to the said fog guide.
- 15 2. The Dispersal Air Scrubber as set forth in claim 1, wherein
several vapor projectors are mounted in the fog guide.
3. The Dispersal Air Scrubber as set forth in claim 1, wherein
the said double inlet blower provides upstream air flow from the
20 air inlet apertures, through the air chamber and the internal space
of the body, to the fog guide.
